

## Scripts to show and hide hidden files on Mac

---

### 1. Open 2 Xcode windows on Mac

### 2. Copy and paste the next scripts to the each window

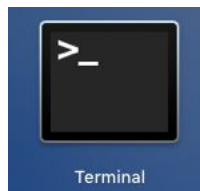

For "Turn on hidden files"	For "Turn off hidden files"
<pre>#!/bin/bash  defaults write com.apple.Finder AppleShowAllFiles true killall Finder</pre>	<pre>#!/bin/bash  defaults write com.apple.Finder AppleShowAllFiles false killall Finder</pre>

### 3. Save the scripts in 2 different files with the names:

- Turn on hidden files.sh
  - Turn off hidden files.sh
- 

## How to use Scripts to switch files visibility on Mac

### 1. Open the Terminal

2. Type *bash* and drag over to the Terminal window the script file "Turn on hidden files". Press Enter. Now you can view all hidden files.

3. Do the same steps with the script file "Turn off hidden files" to hide files back.
