Odesa, Ukraine - Nektony today is pleased to announce the release of VSDX Annotator 1.1, a unique tool, designed to let anyone open, preview, and annotate Visio drawings on Mac. VSDX Annotator is a powerful and professional tool, designed to let Mac users open and annotate all Visio drawing formats. It provides Apple OS X with a wide range of annotation possibilities. "MS Visio is widely used in business. The absence of an OS X version causes an inconvenience for Mac users," explained Asya Karapetyan, PR manager at Nektony. "Visio alternatives for Mac cost more than $200 and there is no need to buy them if you just need to preview Visio drawings and approve them. This app makes it simple to work with MS Visio documents on a Mac, allowing you to preview and modify drawings, diagrams, flowcharts, and other visual data."
