

Hide and view hidden files on Mac with Funter

July 01, 2016

Nektony today introduces Funter 2.0, a free tool designed specifically to hide and view hidden files and folders on Mac. Funter gives anyone the ability to switch a file or folder's visibility in two clicks, making them hidden or unhidden. The app searches for files in system folders and package contents, even where Spotlight never looks for. Mac users can easily find, move and delete any file, including system and browser caches, and so much more.

Odesa, Ukraine - Nektony today is proud to announce the release of Funter 2.0, a freeware app addressed to those who are looking for the simplest way to view hidden files and switch files visibility on Mac. Apps and web browsers on Mac create lots of unneeded files, which are hidden and might utilize significant disk space. Spotlight does not find such invisible & system files. Funter allows you to find those hidden files, make them visible, operate them, and even hide your regular files.

All you need to find hidden files is just type the name of the file in the finder field. Funter allows you to choose a folder for search, show all/hidden/unhidden files, forward to file location in Finder, preview files from Funter, copy, move or delete files using appropriate buttons. Funter makes it able to switch files visibility in one click. It integrates with Finder and adds its own command to the context menu.

Funter is targeted for all Mac users who want to operate hidden files and folders. It makes it easy to find and clear user, system and browser caches. If you need to keep out from the view some files Funter is also here to help you.
