

Speed Up Mac Performance with Memory Cleaner

August 25, 2015

Nektony today announces Memory Cleaner X, a freeware app addressed to those who want to manage and track Random-access memory (RAM) performance in real-time. Memory Cleaner X cleans up inactive memory and displays all memory-consuming applications. Users can find out what apps take the most memory and quit them with the help of the app if necessary. Memory Cleaner X does not stop or slow down your system, even for a second. The cleanup process is smooth and invisible.

Odesa, Ukraine - Nektony today is proud to announce the release of Memory Cleaner X, a freeware utility addressed to those who want to manage and track Random-access memory (RAM) performance in real-time. Memory Cleaner X allows you to clear inactive RAM automatically or manually using the dynamic icon on the menu bar to control memory performance. It helps you track memory usage and allows you to run memory free-up operations and provides you with the following useful information:

- Memory used by the system
- Memory used by applications and processes
- Amount of available memory
- Date and size of latest memory release

Note, that unlike other similar apps, Memory Cleaner X does not stop your system even for a second. The cleanup process is smooth and invisible if do not pay any attention to a number displayed in the menubar. It can show either free or occupied memory percentage, used or free memory size.

Other main app's features:

- Launch app at system startup
- Cleanup memory if large app quit
- Cleanup memory automatically

Automatic memory cleaning has the following tunable procedure: every 2, 4, 8 hours and depending on memory percentage usage.

System Requirements:

- * OS X 10.9 or later
- * 64-bit processor
- * 2.1 MB

Pricing and Availability:

Memory Cleaner X 2.0.2 is Free and available worldwide through the Mac App Store in the Utilities category.
