The new version enhances functionality, adds the extra value for professional utilizing, and improves usability. Version 6.0 introduces Shape Data support, with improved OLE objects support in VSDX format.

Odessa, Ukraine - Nektony today is proud to announce its next important update of VSD Viewer, the app that processes Microsoft Visio files on iOS devices: displaying of object's shape data. Visio Shape Data is a special feature, which allows users to create arrays of named properties, set value for every property, add the data to an ordinary drawing in order to make it more meaningful and representative.

Shape Data is widely used in: network diagrams to describe hardware configuration, organizational charts to add internal information for every item (position, email, birthdate, department, phone number, etc.), floor plans and office layouts to add such properties as wall thickness, real sizes, inventory numbers of furniture, activity diagrams to store item ID, task duration, assigned resources and any other graphical drawing that requires displaying of additional object data.

Activating of this feature is as easy and intuitive as switching layers or navigating drawings' pages. Every object that contains shape data displayed with action button, there is no need to inspect object properties; the app does it for you beforehand.

Shape Data works for any Visio 2000 - 2013 file extension (.VSD, .VDX, .VSDX). It is also possible to print drawings or convert them to PDF with currently activated shape data. The entire set of

ongoing improvements makes portable use Visio more informative and adds extra value to the professionals to browse through complex drawings in detail.
